Roles

Savanna Sentinel has four account types, and what you can do depends on which one you have:

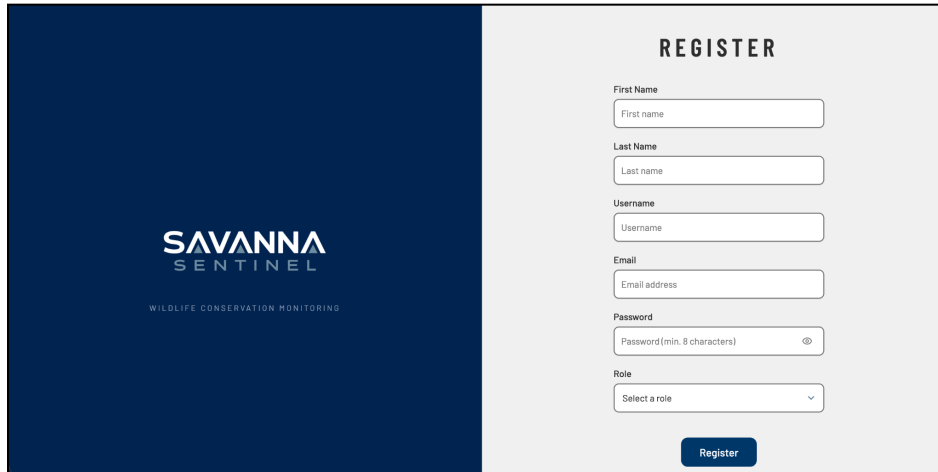

Ranger	Log sightings and incidents, request patrol routes
Analyst	Upload historical data
Community Liaison	-
Admin	Everything above, plus manage user accounts and view audit logs

If you are not sure which type your account is, check the top of the Profile page after logging in - it shows next to your name.

Getting Started

Creating an account

Go to the Register page and fill in your name, email, a password, and pick a role.

REGISTER

First Name

Last Name

Username

Email

Password

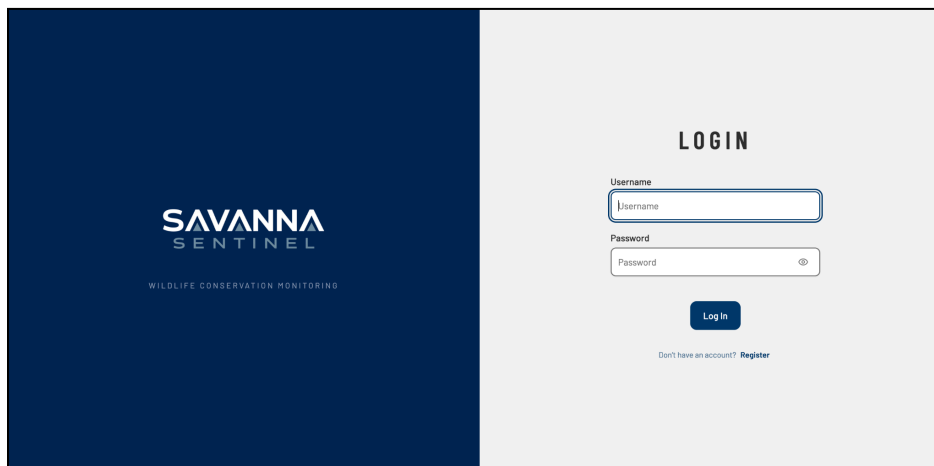

Role

[Register](#)

After you register, your account is created but held inactive until an admin approves it.

Login

Enter your email and password on the Login page. If your account hasn't been approved yet, or if either field is wrong, you will see the same error and won't be logged in.

LOGIN

[Log In](#)

[Don't have an account? Register](#)

Once you are in, you will be redirected to the dashboard.

Your Profile

Your profile page shows your name, email, and role. From here you can:

- Update your display name
- Change your password

Current password

New password

New password must be at least 8 characters.

Confirm password

Change Password

Changing your password signs you out of any other devices you are logged into, so after changing it, you will need to log back in.

Field Reports

Rangers can log two kinds of field reports: sightings, and incidents.

Viewing your reports

The Reports page lists everything you have logged, newest first. You can filter by type, date, or location.

Submitting a new report

Tap "New Report", choose Sighting or Incident, then fill in the location, the date and time it happened, a description, and any photos.

The screenshot shows the 'Field Reports' form in the Savanna Sentinel app. At the top, there are two tabs: 'NEW REPORT' (active) and 'ALL REPORTS'. Below the tabs is a navigation bar with left, center (+), and right arrows. The form is divided into several sections: 'Report Type' with radio buttons for 'Incident' (selected) and 'Sighting'; 'Description' with a large text area and a character count '0 / 300'; 'Incident Type' with a dropdown menu; 'Severity' with radio buttons for 'Low', 'Medium', and 'High'; 'When did this happen?' with a date and time picker showing '2026/07/27, 16:40'; 'Location' with a 'Use current location' button; 'Latitude' and 'Longitude' input fields; and 'Photos (optional)' with a dashed border, a plus icon, and the text 'Add photos' and 'JPG or PNG, up to 5 photos, 10MB each'. At the bottom right is a 'Submit Report' button.

Once submitted, you can still edit or delete your own reports if they have not synced with the server, once they are synced you will no longer be able to edit or delete a field report.

Editing or deleting a report

Open a report from your list, and at the bottom press "Delete Draft" to delete the report, or change any info and press "Save Draft" to update your existing report.

The screenshot shows the bottom navigation bar of the app. It consists of three main sections: a list navigation bar with left, center (1), and right arrows; a red 'Delete Draft' button; and a dark blue 'Save Draft' button.

Data ingestion

Ingestion is how analysts bring historical data into the system from a CSV file

Preparing your file

The uploader expects a CSV with a fixed set of columns: `record_id`, `ingestion_timestamp`, `source_system`, `data_domain`, `event_type`, `payload_size_kb`, `priority_level`, `retry_count`, `is_encrypted`, `status`. The header row has to match this exactly. If a column is missing, renamed, or out of order, the file won't be accepted.

Uploading and previewing

Drag your CSV onto the upload area, or click to browse for it. Once it's accepted, you won't see the raw file, instead you get an editable table showing every row, so mistakes can be fixed on the spot before anything goes further.

Data Ingestion

Drop CSV here or click to browse
Accepts .csv only, header row must match the expected schema

No data loaded

Fixing problems before you submit

As you edit the table, any cell that doesn't match the expected type is flagged live with a red border and a short message explain what's wrong. Larger files are pagged 50 rows at a time.

null Expected boolean, got "null"	"record_id" is missing	five Expected number, got "five"
---	---	--

Submitting

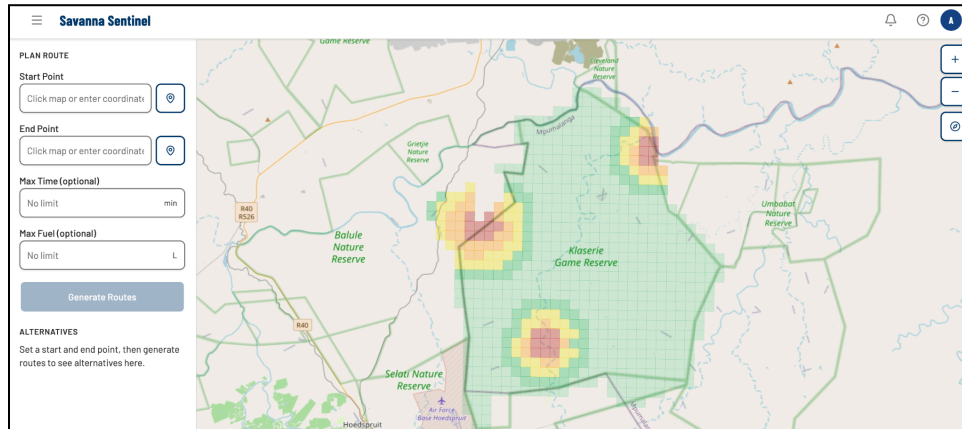

Once the table is clean, press "Submit".

Submit

If the batch goes through, you will see a completion and option to upload another file.

Patrol Planner

Open the Patrol Planner page to request suggested patrol routes for a park.

Requesting Routes

Set a start point and an end point for the patrol, either by typing coordinates or by clicking the pin button and tapping the two locations on the map.

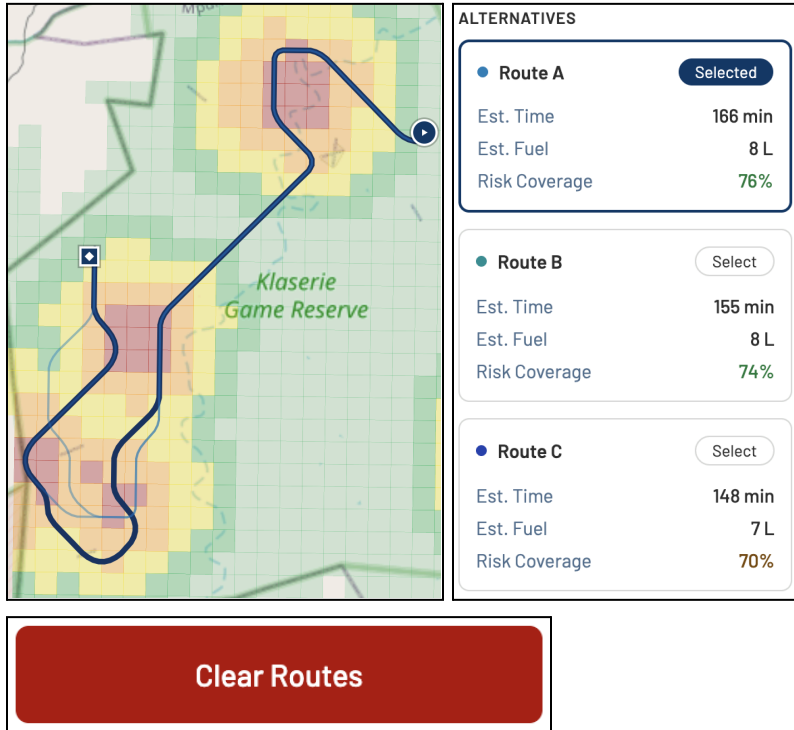

-24.29892, 31.26308			
--	--	--	--

You can optionally cap the patrol by Max Time (minutes) and Max Fuel (litres), leave either blank for no limit, and then press "Generate Routes".

Max Time (optional)	
No limit	min
Max Fuel (optional)	
No limit	L
Generate Routes	

Comparing routes

Up to three routes appear as lines on the map, along with cards showing each route's estimated time, estimated fuel use, and risk coverage. Click a card to highlight that route on the map; the others dim. Press "Clear Routes" to discard the results and start over.

The interface displays a map on the left with three routes (A, B, and C) plotted. Route A is highlighted in blue, while Routes B and C are shown in a lighter blue. The map includes a heat map overlay and labels for 'Klaserie Game Reserve'. On the right, under the heading 'ALTERNATIVES', there are three cards for each route. Each card shows the estimated time, fuel, and risk coverage. Below the map is a large red button labeled 'Clear Routes'.

ALTERNATIVES	
Route A Selected	
Est. Time	166 min
Est. Fuel	8 L
Risk Coverage	76%
Route B Select	
Est. Time	155 min
Est. Fuel	8 L
Risk Coverage	74%
Route C Select	
Est. Time	148 min
Est. Fuel	7 L
Risk Coverage	70%

Clear Routes

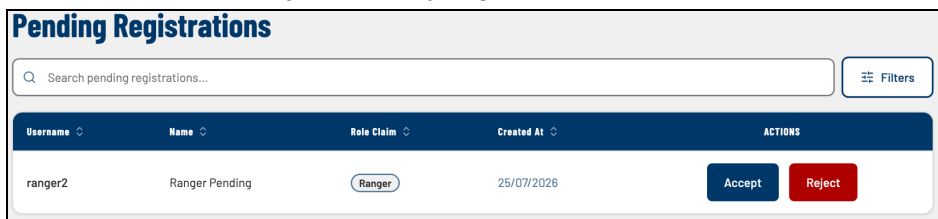

If no route can be found within your time or fuel limit, you'll see a message telling you to raise one of those limits and try again.

Admin Tools

Admin accounts get an extra section covering user management and system oversight.

Account approvals

You can approve or reject a newly registered account

The screenshot shows the 'Pending Registrations' section of an admin interface. It features a search bar, a 'Filters' button, and a table of pending registrations. The table has columns for Username, Name, Role Claim, Created At, and Actions. One registration is listed: 'ranger2' with the role 'Ranger Pending' and a creation date of '25/07/2026'. The 'Actions' column for this entry contains 'Accept' and 'Reject' buttons.

Username	Name	Role Claim	Created At	ACTIONS
ranger2	Ranger Pending	Ranger	25/07/2026	Accept Reject

Role Management

You can change a user's role
