Import CSV

Interaction

Will use the OS/Browser File Browser to upload a file

Content

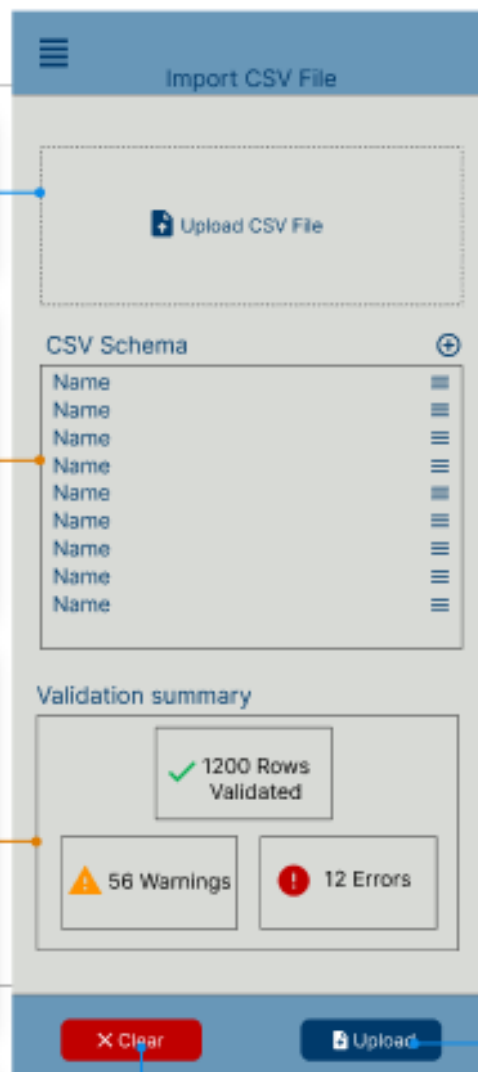

This feature is getting scrapped in the next redesign, since dynamically mapping a db schema to a user specified CSV is challenging, will probably be changed to select a predefined schema

Content

Will display how far the ingestion controller got with parsing the data. Editing the data to match the controller's needs will be a desktop exclusive feature, since fitting that much information on a mobile screen is hard, which the client has confirmed is an appropriate course of action

Interaction

Emergency escape for the user to improve user experience

The interface is titled "Import CSV File" and features a blue header bar. Below the header is a dashed box containing an "Upload CSV File" button with a file icon. Underneath is a "CSV Schema" section with a list of ten "Name" entries, each accompanied by a hamburger menu icon. A "Validation summary" section follows, displaying a green checkmark and "1200 Rows Validated", a yellow warning icon with "56 Warnings", and a red error icon with "12 Errors". At the bottom, there are two buttons: a red "X Clear" button and a blue "Upload" button with a file icon.

Interaction

Commits the upload to the DB

Content

This screen will need to face a slight redesign, since clarification from the client confirmed that the community liaison is not a public account, meaning not anyone can submit data onto the system. Otherwise this follows the field report system pretty closely

Map View

Interaction

Each segment can be tapped to select it for information

Interaction

The map can be scrolled by dragging. A pin cannot be dropped here, and instead displays your current location

Interaction

Indicating that this menu can be scrolled up or down to get less/more information

Interaction

A bottom menu that will appear if a cell is clicked on, showing information

Development

Will launch the patrol plan screen, which is not implemented in this wireframe, as more requirements need to be elicited for this, will probably be in the next version

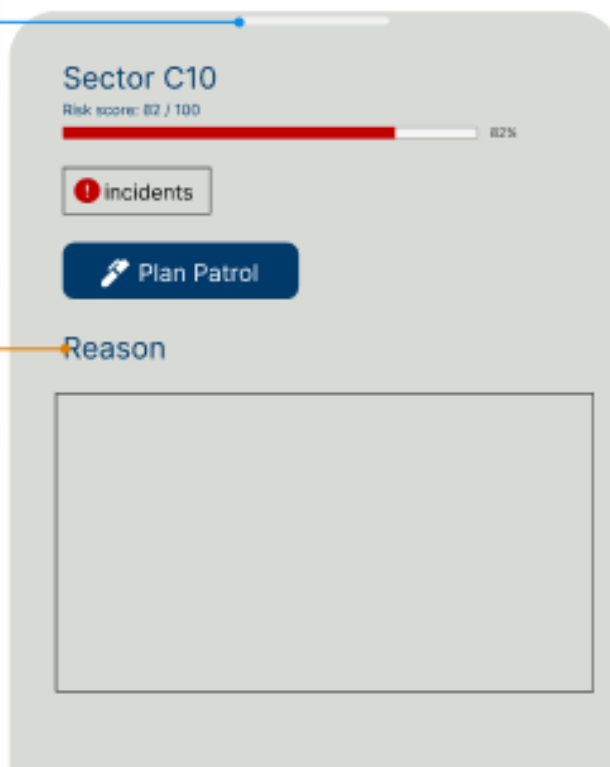

Select Report Expanded

Interaction

Indicates the menu can be slided
